

Off-Road Tuner delta4x4 Puts New Ford Bronco on General Tire Off-Road Tires

Hanover, Germany, July 10, 2024. Off-road tuner delta4x4 relies on off-road tires from General Tire for the refined version of the new Ford Bronco. The tires of the Grabber X3 model, designed for off-road driving and muddy passages, are part of the off-road tuning of the experts from Unterumbach, Bavaria, Germany. The mounting of the General Tire Grabber X3 in the size 35 x 12.5 R 20 increases the ground clearance by an even more off-road 45 millimeters, while a wheel cover widens the new off-road classic by around 100 millimeters. The tires are mounted on the delta4x4 rim with a removable ring that can be disassembled and replaced in case of damage; the rim has the dimensions 20 x 9.5.

The 335 hp (246 kW) Ford Bronco Outer Banks with its 2.7-liter V6 engine can be equipped in further tuning steps with an optional roof rack with outdoor bags and canisters. Together with General Tire's Grabber X3 mud traction tires, this makes the design and off-road classic a very off-road vehicle for expeditions, farmers, foresters and 4x4 enthusiasts. Designed for extreme use in mud, loose ground and rocky terrain, the robust tire from the brand with American roots also has safe driving characteristics on the road. The Grabber X3 from General Tire is manufactured for rims with diameters between 15 and 20 inches in diameter, it can also be mounted as an M+S-marked off-road tire on vehicles with a higher top speed than those of the respective tire size.

General Tire

Since it was founded in Fort Mill (South Carolina) in 1915, General Tire boasts a company history spanning more than 100 years. In 1987, the company was taken over by Continental. Today, General Tire sells tires for cars, trucks, and industrial vehicles worldwide, as well as specially designed tires for 4x4 vehicles. www.generaltire-tyres.com
